

METHOD AND APPARATUS FOR PROVIDING ACCESS TO PERSONAL INFORMATION

Abstract of the Disclosure

5

A personal database (102) is maintained by the owner of personal information that is to be shared. When a requestor (103) requests personal information, the request is made to a token generation subsystem (101) that produces a token that allows access to the personal database. The personal database will allow access to
10 information only identified by the token.
